

SHSU Redesign Vision

To enhance the user experience and address the shortcomings of the current SHSU app, the redesign should focus on the following key aspects:

1. User-Friendly Interface:

- Implement a clean and intuitive design that is easy to navigate.
- Streamline the user interface to reduce "clunkiness" and make information easily accessible.

2. Persistent Login:

- Address the issue of frequent sign-outs by introducing a persistent login feature. This will save users' credentials securely and allow seamless access without the need for repeated logins.

3. Integrated Services:

- Consolidate various functionalities, including class schedules, grades, maps, current events, videos, photos, emergency alerts, academic resources, library services, and communication platforms within the main app. Provide seamless integration with external resources commonly used by students, enhancing the app's overall functionality and usefulness. This consolidated approach eliminates the need for multiple apps, offering a unified and comprehensive user experience.

4. Personalized Dashboards:

- Create customizable dashboards for students, allowing them to prioritize and display the information most relevant to their needs. This could include quick access to class schedules, upcoming events, and personalized notifications.

5. Notification System:

- Implement a robust notification system to keep students informed about class updates, campus events, and emergency alerts. Users should have the flexibility to customize notification preferences.

6. Feedback Mechanism:

- Include a feedback mechanism within the app to allow users to report issues, suggest improvements, or provide general feedback. Regular updates and improvements based on user input will contribute to a more user-centric app.

7. Offline Functionality:

- Ensure essential features are available offline, such as viewing class schedules and accessing important resources. This is crucial for students in areas with limited connectivity.

8. Cross-Platform Compatibility:

- Develop the app to be compatible with various devices and operating systems, ensuring a consistent and optimized experience for all users.

9. Security Measures:

- Prioritize the security of user data by implementing robust encryption and following best practices for app security. Users should feel confident in the privacy and protection of their personal information.

By addressing these aspects, the redesigned SHSU app can provide a more seamless, user-friendly, and comprehensive experience for students, meeting their diverse needs and enhancing their overall college experience.
